Background

Marc is a 21-year-old computer science student with a passion for new technologies and hands-on projects. He loves testing out new apps, but he hates wasting time on over-complicated interfaces. Between his classes, group work, personal projects, and a part-time student job in the evening, his days are packed.

He dreams of becoming a full-stack developer or a product designer, and he is drawn to anything related to efficiency, organization, and life-simplifying tools. Marc is curious, impatient, and loves it when things "just work."

He relies primarily on his smartphone for everything: managing his coursework, staying in touch with friends, organizing tasks, listening to music, and tracking his projects. He spends a lot of time commuting, meaning he often uses apps on the go, between two subway stations.

In his personal life, Marc enjoys sports (especially football and weightlifting), video games, TV shows, and hanging out with friends. He has no patience for complexity or long-winded processes. He wants to get straight to the point—whether in his studies or in the apps he uses.

Motivations

- **Save time.**
- **Having a reliable and pleasant app to use.**
- **Feeling efficient in his daily tasks.**
- **Using an app that "just works" the first time.**

Frustrations

- **Cluttered or poorly organized interfaces.**
- **Hidden menus or navigation that is too deep.**
- **Bugs, lag, and slow-loading screens.**
- **Being forced to create an account just to try the app.**
- **Unclear icons or buttons.**

Goals

- **Speed of Action:** Complete tasks quickly without having to search for features.
- **Immediate Clarity:** Understand exactly what the app does at a single glance.
- **On-the-go Usage:** Be able to use the app during commutes or between activities.
- **Instant Access:** Find essential information in less than 10 seconds.
